EurAxxess' Encrypted E-mail accounts information

Hush Encryption Standard: The 2046 bit encryption technology used by our e-mail accounts is provided by Hush Communications on the basis of a cooperation agreement. You can obtain detailed information on the technology employed at www.hushmail.com.

This system allows us to provide you with the highest encryption standards available today, all under our proprietary domain infrastructure. Furthermore, it allows you to exchange encrypted e-mail with anyone signed up under a standard hushmail account; our accounts are compatible. The difference is that the accounts with EurAxxess have a higher storage quota and extra functionality of the "Hush Private Label" model.

Entry Point: You can enter your e-mail account via the internet from anywhere in the world. It is accessible via our website at www.euraxxess.com.

Paging Function: Your privacy E-mail account is equipped with a paging function that allows notification of e-mails received at your euraxxess.com account.
